

Our Learning this Half Term.....

To really learn about the differences between hot and cold we must experience it for ourselves. We have been playing with ice and also playing outdoors where it has been very cold lately.

We have been exploring ingredients and watching them change when we mix them together. We enjoy using all of our senses to taste, touch, see and smell all of the items that we have used.

0-2's

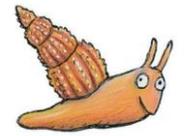

We have been making noises for some of the animals that we have in Nursery. Ask us what Lions say and we can be very scary and loud. We have also been learning some new animal names.

We learn about mark making by watching as marks are left through our body movements. We have used powder paints, shaving foam and ice to make different marks and mix different colours

Our Learning this Half Term.....

In 2-3's we have been exploring ingredients and learning about using heat to cook things. We made and tasted our own Gingerbread men after listening to the story.

We have used paint brushes to paint onto ice. We started to notice what happened as we mixed up the colours but mostly we wanted to explore the melting cubes and the way they felt with the paint on our hands.

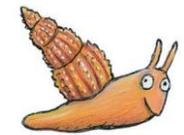

2-3's

We found out that things can be frozen in ice. The cold weather froze some leaves outdoors and we have been looking at pictures of our focus artist's work. We froze flowers in tubs in our freezer

We have been sorting and categorising animals and we are beginning to know that some animals live in hot places and some belong in cold places.

Our Learning this Half Term.....

We have been studying the sculptures made by artist Azumo Makato. We have learnt how to freeze things in ice ourselves and make our own sculptures. They didn't last long and some of us just couldn't wait to smash out the contents. We had lots of fun.

We have been painting on ice and have made our own paint using ice and powder paint. We watch as the colours mix and can talk about what we see happening. We have also been adding in other things to change the textures .

3-4's

We now know about animal habitats and where we would find certain animals in the world. We also know that some animals can live in both hot and cold places and that many build their own homes.

During our cooking and baking sessions we have been looking at weighing and mixing ingredients as well as following recipes. We followed the method and watched as the butter, syrup and sugar melted together. We can use words such as solid and liquid to describe the process now.
